

LIVIN MATHEW

Solutions Architect

Kochi, India | +91 9744142626 | livinmathew99@gmail.com | livinmathew.com

SUMMARY

Solutions Architect with 11+ years delivering end-to-end enterprise solutions spanning distributed systems, serverless architectures, and GenAI platforms on AWS. Combines deep technical architecture with hands-on delivery ownership, client requirement management, and product thinking to translate complex business problems into scalable, production-grade systems.

- End-to-end AI/ML and GenAI platforms for enterprise clients across healthcare and knowledge management domains
- 35% infrastructure cost reduction through architecture modernization
- SOC 2, HIPAA & HITRUST-compliant systems passing audits on first attempt
- 95% legacy tech debt elimination while scaling platforms to millions of users
- Cross-functional team leadership across backend, frontend, data, and AI layers

Strong client-facing experience with a track record of leading requirement workshops, solution walkthroughs, and sprint-level execution in Agile delivery models.

CORE EXPERTISE

Solution Architecture & Delivery: End-to-End Project Delivery · Technical Architecture · System & Integration Design · Client Requirement Management · Solution Workshops · Product Thinking · Agile/Scrum Execution · Sprint Planning & Backlog Grooming

GenAI & AI/ML: RAG Architectures · LangGraph · Multi-Agent Orchestration · Semantic Caching · Vector Search (OpenSearch, pgvector, Qdrant) · LLM Evaluation Frameworks · Prompt Optimization · AI/ML Data Pipelines · Intelligent Automation

Cloud & Systems: AWS (Lambda, Fargate, ECS, Step Functions, DynamoDB, S3, OpenSearch, Bedrock, EventBridge, SQS) · Event-Driven Architecture · Multi-Region Deployments · DR (RTO/RPO) · CDK · Terraform · SAM · Workflow-Based & Data-Driven Systems

Security & Observability: OIDC · OAuth2 · RBAC · SOC 2 · HIPAA · HITRUST · Secure SDLC · CodeQL · OWASP ZAP · OpenTelemetry

Languages, Frameworks & Tools: Go · Node.js · Python · TypeScript · React · FastAPI · LangGraph

PROFESSIONAL EXPERIENCE

Galent (Client: CentricSoftware)

Lead AI Engineer May 2026 – Present

- Lead end-to-end solution architecture for Centric's GenAI PLM suite (AI-assisted tech pack generation, BOM intelligence, design and material search), deployed to Tier-1 fashion, footwear, and apparel brands including Asics and Under Armour.
- Designed multi-agent system over PLM data (styles, BOMs, suppliers, materials, compliance attributes) using FastAPI + LangGraph with Bedrock Claude, enabling natural-language queries and workflow automation across millions of SKUs with multi-tenant isolation and role-based access enforcement.
- Built PLM-specific evaluation harness covering domain accuracy (BOM correctness, material code mapping, sustainability and compliance flags), groundedness, and cost-per-query, gating production releases across enterprise customer rollouts.

TEKsystems (Client: Sage UK)

Mobile Product Lead Jan 2024 – April 2026

- Own end-to-end solution architecture and delivery for an enterprise GenAI knowledge platform serving multiple product teams across AWS multi-region infrastructure.
- Designed multi-agent RAG system (FastAPI + LangGraph, 6 concurrent agents) with semantic caching, Claude integration, and multilingual support across 7+ locales.
- Architected Bedrock-powered semantic search ingesting 500k+ documents nightly into OpenSearch hybrid vector index, translating business requirements into scalable data and AI pipelines.
- Built 15-metric LLM evaluation framework (groundedness, relevance, latency, token cost), reducing inference cost by 35% and ensuring quality standards across releases.
- Reduced customer query response time from 2 hours to ~10 minutes via automated RAG workflows — directly aligning engineering output with client business outcomes.
- Engineered distributed ingestion workflows using Step Functions (10 concurrent maps) with multi-region CDK stacks, GitHub Actions CI/CD, and OIDC federation.
- Integrated OpenTelemetry observability; achieved zero security findings during audit.
- Act as technical interface between client stakeholders and engineering teams — leading requirement workshops, sprint planning, backlog grooming, and technical walkthroughs.

ChiSquare Labs (Client: SiteRx US)

Solutions Architect Apr 2023 – Dec 2023

- Led monolith-to-serverless migration (Lambda, DynamoDB, EventBridge), improving scalability and reducing infrastructure cost by 35%.
- Extended and enhanced existing AI/ML data pipelines for patient EHR classification — adding new feature modules, improving model accuracy, and scaling ingestion for growing clinical trial volumes.
- Developed reusable CDK templates standardizing logging, monitoring, and security patterns; adopted across 20+ engineers as an enterprise accelerator.
- Directed SOC 2 compliance initiatives and secure SDLC implementation, managing scope and delivery dependencies across cross-functional teams.

Metric Tree Labs (Client: SiteRx US)

Solutions Architect Jun 2020 – Mar 2023

- Designed and delivered end-to-end AI/ML data pipelines for classifying patient EHR documentation to support clinical trial study matching — owning solution architecture from business requirement scoping through production deployment.
- Architected HIPAA-compliant data ingestion and processing workflows, passing HITRUST audit on first attempt.
- Built workflow-driven systems applying product thinking to convert complex healthcare domain requirements into technical architecture, user stories, and acceptance criteria.
- Designed DR strategy with defined RTO/RPO targets and validated failover drills across multi-module enterprise systems.
- Eliminated 95% legacy technical debt through architecture modernization, increasing client revenue 40% and developer productivity 30%.
- Led cross-functional delivery teams in Agile sprints, managing milestones, risks, and client-facing demos end-to-end.

Riafy Technologies

Software Architect Mar 2019 – May 2020

- Scaled Android applications to 10M+ downloads through backend modernization and system architecture improvements.
- Improved legacy AngularJS platform performance by 90%, leading technical design reviews and guiding implementation teams.

Lmntrx Tech

CEO & Co-Founder Nov 2014 – Mar 2019

- Bootstrapped startup to acqui-hire exit; owned end-to-end architecture, hiring, delivery, and P&L across the full product lifecycle.
 - Reduced operational costs 25% and tripled traffic through scalable cloud architecture and growth optimization.
 - Led client engagements, requirement workshops, and solution delivery as the primary technical and business interface.
-

PROJECTS

- **KloudArch** — Platform converting architecture diagrams into deployable Terraform, piloted with healthcare clients.
 - **MidEast Pulse** — Real-time Middle East conflict dashboard aggregating live data into an interactive monitoring interface (mideastpulse.live).
 - **S3 Virus Scanner** — Serverless malware scanning & quarantine pipeline.
 - **Go-Fake** — Schema-aware CLI mock data generator.
 - **create-sequelize-express** — NPM scaffolding tool (2k+ downloads).
-

EDUCATION

Bachelor of Technology in Computer Science (coursework completed through 8th semester)

MG University, Kerala (2014 – 2018)
